

**Amendments to the Claims:**

This listing of claims will replace all prior version, and listings, of claims in the application. Where claims have been amended and/or canceled, such amendments and/or cancellations are done without prejudice and/or waiver and/or disclaimer to the claimed and/or disclosed subject matter, and the applicant and/or assignee reserves the right to claim this subject matter and/or other disclosed subject matter in a continuing application.

**Listing of Claims:**

1. (Currently amended): A method for setting up redirection of contacts coming to a terminal to at least one other communication system, comprising:

sending a proposal to the terminal [[of]] an address of said at least one other communication system by utilizing a data transmission connection set up between the terminal and a first communication system to be accepted and/or to activate the redirection wherein the proposal comprises possible call forward targets of the at least one other communication system outside a home network of the terminal; and

if the proposal is accepted, automatically setting up a redirection of calls to the terminal to the at least one other communication system.

2. (Previously presented): The method according to claim 1, wherein the at least one other communication system is located outside the coverage area of the first communication system.

3. (Previously presented): The method according to claim 1, wherein the data transmission connection comprises a short-range wireless data transmission connection.

4. (Previously presented): The method according to claim 1, wherein the terminal comprises means for performing mobile communication.

5. (Previously presented): The method according to claim 1, wherein the terminal functions in an Internet Protocol based multimedia system (IMS).

6. (Previously presented): The method according to claim 1, wherein the received contacts are directed to the at least one other communication system depending at least in part on a parameter.

7. (Previously presented): The method according to claim 1, wherein a contact leaving another terminal and aimed at the terminal is directed to the at least one other communication system.

8. (Previously presented): The method according to claim 1, wherein a parameter is determined from the terminal that is the actual target of the contact.

9. (Previously presented): The method according to the claim 1, wherein data connected to the redirection is transmitted to another terminal.

10. (Previously presented): The method according to claim 1, wherein deactivation of redirection is automatic if the terminal is switched on or at the latest after a certain time.

11. (Currently amended): A system which comprises:

~~a first terminal,~~

a first communication system capable of being coupled to [[said]] a first terminal via a data transmission connection, and

~~at least one other communication system;~~ wherein a contact directed to the first terminal is capable of being directed to [[the]] at least one other communication system, wherein the data transmission connection is capable of transmitting the address of the at least one other communication system as a proposal to the first terminal, wherein the proposal comprises possible call forward targets of the at least one other communication system outside a home network of the terminal, said first communication system being capable of automatically setting up a redirection of calls to the terminal to the at least one other communication system if the proposal is accepted.

12. (Previously presented): The system according to claim 11, wherein the at least one other communication system is located outside the coverage area of the first communication system.

13. (Previously presented): The system according to claim 11, wherein the data transmission connection comprises a short-range wireless data transmission connection.

14. (Original): The system according to claim 11, wherein the terminal comprises means for performing mobile communication.

15. (Previously presented): The system according to claim 11, wherein the terminal is arranged to function in an Internet Protocol based multimedia system (IMS).

16. (Original): The system according to claim 11, wherein the terminal comprises means for automatically deactivating the redirection.

17. (Previously presented): The system according to claim 11, wherein, in addition, the system comprises means for directing the contact to the at least one other communication system based at least in part on a parameter.

18. (Original): The system according to claim 11, wherein, in addition, the system comprises means for transmitting the data connected to the redirection to another terminal.
